

RESIDENTIAL
AGRICULTURAL

It is the home owner's continuing responsibility to maintain the grading of their property as approved by the City. Often drainage problems will occur due to incorporation of landscaping features and construction of fencing, patios, walkways, decks and swimming pools etc. All new landscaping and construction should be carried out by the home owner without disruption to the grading design of the lot so as not to adversely affect the drainage patterns around your land.

Are you taking the right steps to prevent flooding on your property?
